

Introduction to Nuclear and Radiological Source Security

Course Number and Title

Introduction to Nuclear and Radiological Source Security - 21975 - HSCI 41500 - 001
Intro to Nuc & Rad Security - 19034 - HSCI 59000 – 018
Intro to Nuc & Rad Security - 19046 - POL 42900 - 015

Meeting Time

T, Th, 3:00-4:15 pm, WALC 3132

Course Director and Instructor

Jason T. Harris, Ph.D.
Purdue University
School of Health Sciences
550 Stadium Mall Drive
West Lafayette, IN 47906

Office: HAMP 1173D
Office Hours: T - Th, 10:30am-11:30am (or appointment)
Office Phone: P: (765) 496-1271
E-mail: jtharris@purdue.edu

Course Description

HSCI 41500, 59000, POL 429000; Semester: 01 (Fall 2019), Credit: 3.0, Type: Lecture

This course focuses on the basic elements of nuclear and radiological source security. It examines methods for planning and evaluating nuclear security activities at the State and facility level, establishing nuclear security culture in different types of nuclear and radiological installations, and examines nuclear cyber and information security measures. Issues and approaches for nuclear security concerns, both state-level (e.g., nonproliferation and deterrence) and asymmetric concerns (e.g., nuclear smuggling and nuclear terrorism) will be addressed. The integration of safety and security and the use of alternative technologies will also be covered. Group exercises and simulations in applied nuclear security scenarios will complement lectures given by a number of national and international experts. This course is designed for both “technical” (engineering and science) and “non-technical” (policy) students and the interaction between students of different backgrounds is encouraged.

****This course is generously supported by a Stanton Foundation grant****

Overall Course Goal

The course will introduce the student to the basic elements of nuclear and radiological source security.

Learning Outcomes

After completion of this course, students will have a broad picture of nuclear security components and their interconnections, and of the planning of nuclear security activities at the State and facility level.

Learning Outcomes:

- Describe the basic elements of nuclear security

- Explain why nuclear security is important
- Compare and Contrast the key international and state-level nuclear security treaties, agreements, and regulations
- Distinguish between nuclear safety, security, and safeguards (N3S)
- Distinguish between different aspects of nuclear security applications at the international, state, and facility level
- Design the basic nuclear security infrastructure for a facility
- Illustrate understanding through technical and policy-oriented exercises
- Expand relevant technical knowledge base as well as introduce students to new instrumentation and concepts

Expectations

Students are expected to arrive ready for discussion. This course and classroom are set up to facilitate student participation with information from the readings, lectures and assignments will be used as a material for group discussions.

All papers assigned are to be typed and include full citations. Students may choose their preferred citation style (APA, MPA or Chicago) but it must remain consistent throughout the paper. An assortment of citation tools are available online, a link to Zotero is listed below though feel free to use your preferred method of building your bibliography

Zotero Citation Tool: <http://www.zotero.org/>

Class Grading Policy

- 1) Assignments/Homework, in total, will represent 25% of the overall class grade.
 - a) Students should expect between 4 and 5 homework assignments (which may include reading summaries) during the semester. Students are encouraged to work together on homework (except where noted otherwise), but the final product should be completed independently. Homework problems can and may be the basis for test questions.
 - b) Problem sets should be typed, where possible. Answers involving computations should state the relevant formulas, and give a complete and clear series of steps used to arrive at the answer, which should be clearly indicated. Answers to questions should be in narrative form, using complete sentences where appropriate, with proper spelling and grammar. All terms and abbreviations should be defined. All relevant information should be included. Proper scientific terminology should be used. The answers as well as the steps taken to arrive at them should be clear on the first reading. Numerical quantities must indicate the units where appropriate. All answers are to be circled. Problem sets will be graded both on technical content and clarity of presentation.
 - c) All homework assignments must be completed. Assignments are due in class on the due date (typically one week after the assignment is given). Late assignments will be penalized 10% per day. The maximum penalty (after one week), will be 50%. After that time, the student is to turn in the homework or receive a 0% for that assignment.
 - d) Homework problems will be graded on either a correct or incorrect basis with partial credit. Questions completed correctly will be awarded an appropriate number of points. Assignments

will typically include several multi-part questions. Students are encouraged to write out the assigned questions. At the discretion of the instructor, solutions, which are given without an explanation of the solution method, may be marked as wrong regardless of correctness. The student is encouraged to carry units along with the solution of the problem, and provide a neat easy to follow answer. Homework which is too difficult to follow will be returned with a zero grade until completed in an acceptable fashion.

2) There will be two exams total (2 midterms).

- a) Exams will cover topics on homework, lectures, and assigned reading.
- b) The exams will be worth 30% of the final class grade (15% each).
- c) At the discretion of the instructor, any evidence of dishonesty are grounds for failing tests or examinations, and subject to other university disciplinary actions.

3) Participation/Discussion

- a) Each class a brief overview will be presented by a student
- b) There will be a number of “graded” participation assignments throughout the semester. No make ups will be given, however, one missed class will be allowed
- b) Class participation and discussion is encouraged during class (especially for exercises) and will account for 25% of the final grade

4) Final Group Paper/Project

- a) Details are provided in a separate document
- b) The report/presentation will be due the last week of classes.
- c) The project will be worth 20% of the final class grade.

You are expected to participate actively in the class with appropriate questions or comments. You are also encouraged to keep up with the reading assignments and homework. I encourage you to participate actively in the class with appropriate questions or comments.

Don't hesitate to seek help if you have any questions about the material, the course in general, your grades, etc. Your job as a student is to learn as much as possible from this course. My job is to help you in that pursuit!

Final Class Grade

a) Grades will be based on:

Homework/Assignments	25%
Participation/Discussion	25%
Exams	30%
Final Group Project	20%

b) Tentatively, grades will be earned based on a straight scale grading policy:

≥ 98%A+
≥ 93%A
≥ 90%A-
≥ 88%B+
≥ 83%B
≥ 80%B-

≥ 78%C+
≥ 73%C
≥ 70%C-
≥ 60%D
< 60%F

c) The instructor reserves the right to change the grading scale, and assignment weighing. Such changes will be:

- i) based on professional judgment
- ii) applied across the board to all students
- iii) in favor of the students

For the purpose of final grading, fractions of a percentage will not be rounded up.

Example: Penny scores 80.5, 75.2, and 90.7 respectively on her three examinations and 92.5 for her homework. Her grade is computed as $(80.5+75.2+90.7+92.5) \times 0.25 = 84.725 = 84\%$ i.e. Grade B.

Graduate and undergraduate students will take the course together, however assessment will differ in the following ways:

- 1. Graduate students will have to answer additional questions on the exam. Undergraduate students will have the opportunity to answer the graduate student questions for extra credit.**
- 2. Graduate students will be required to take a leading role in the final group project/paper and will be assessed on their leadership and organizational skills.**
- 3. Graduate students will have to submit a longer, more detailed final group project/paper.**
- 4. Assignments will be divided between undergraduate and graduate students. Graduate students will have to answer more questions and the level of detail in the answers will be assessed to a higher standard.**

Disabilities

Purdue University strives to make learning experiences as accessible as possible. If you anticipate or experience physical or academic barriers based on disability, you are welcome to let me know so that we can discuss options. You are also encouraged to contact the Disability Resource Center at: drc@purdue.edu or by phone: 765-494-1247.

Mental Health Well-being

Purdue University is committed to advancing the mental health and well-being of its students. If you or someone you know is feeling overwhelmed, depressed, and/or in need of support, services are available. For help, such individuals should contact Counseling and Psychological Services (CAPS) at (765) 494-6995 and <http://www.purdue.edu/caps/> during and after hours, on weekends and holidays, or through its counselors physically located in the Purdue University Student Health Center (PUSH) during business hours.

Course Webpage

<https://mycourses.purdue.edu>

All course related materials and announcements are available on the Blackboard course webpage listed above. Lectures and assignments (when applicable) can be downloaded each day before class. Please speak with the instructor if you are not familiar with the Blackboard platform.

Attendance and Classroom Policies

Lectures are scheduled for Tuesdays and Thursdays from 3:00-4:15 pm in WALC 3132. Attendance is strongly encouraged but not required. Skipping lectures and/or not reading assignments may have a negative impact on your final grade. As per the attendance sections of the Purdue University student regulations:

“The University expects that students will attend classes for which they are registered. At times, however, either anticipated or unanticipated absences can occur. The student bears the responsibility of informing the instructor in a timely fashion, when possible. The instructor bears the responsibility of trying to accommodate the student either by excusing the student or allowing the student to make up work, when possible. The University expects both students and their instructors to approach problems with class attendance in a manner that is reasonable.”

No video-recording will be allowed. Cell phones shall be turned off during the lectures and exams.

Emergency contingency plans: In the event of a major campus emergency (or adverse winter weather event), course requirements, deadlines and grading percentages are subject to changes that may be necessitated by a revised semester calendar or other circumstances beyond the instructor’s control. Any information about such changes in this course will be available using the instructor’s email and/o phone numbers (on front page) or the class website

Attached to the syllabus is an “Emergency Preparedness for Classrooms” sheet that provides additional preparedness information. Please review the sheet and the Emergency Preparedness website for additional emergency preparedness information.

Academic Dishonesty Policy

Ethics is an important issue in any walk of life. The professions of Health Physics and Medical Physics, Nuclear Engineering, Public Policy, and indeed every profession, demand high ethical standards of its constituents. This is because ethics applied by an occupational or environmental health professional can determine the length and quality of life enjoyed by those individuals and groups that they encounter, assess, and protect. Just as many professions have Codes of Ethics, you, as students have a Code of Ethics, or Honor Code at Purdue (see below). The instructor looks forward to a class with the characteristics of high ethical standards and enthusiastic interest in the material.

Incidents of academic misconduct in this course will be addressed by the course instructor and referred to the Office of Student Rights and Responsibilities (OSRR) for review at the university level. Any violation of course policies as it relates to academic integrity will result minimally in a failing or zero grade for that particular assignment, and at the instructor's discretion may result in a failing grade for the course. In addition, all incidents of academic misconduct will be forwarded to OSRR, where university penalties, including removal from the university, may be considered.

Academic Integrity: Academic integrity is one of the highest values that Purdue University holds. Individuals are encouraged to alert university officials to potential breeches of this value by either emailing integrity@purdue.edu or by calling 765-494-8778. While information may be submitted anonymously, the more information that is submitted provides the greatest opportunity for the university to investigate the concern.

Academic and personal misconduct by students in this class are defined and dealt with according to the procedures in the Regulations Governing Student Conduct, Disciplinary Proceedings, and Appeals (http://www.purdue.edu/studentregulations/student_conduct/regulations.html).

Purdue Honors Pledge

“As a boilermaker pursuing academic excellence, I pledge to be honest and true in all that I do. Accountable together - we are Purdue.”

Diversity & Inclusion

Purdue University is committed to maintaining a community which recognizes and values the inherent worth and dignity of every person; fosters tolerance, sensitivity, understanding, and mutual respect among its members; and encourages each individual to strive to reach his or her own potential. In pursuit of its goal of academic excellence, the University seeks to develop and nurture diversity. The University believes that diversity among its many members strengthens the institution, stimulates creativity, promotes the exchange of ideas, and enriches campus life. Purdue's nondiscrimination policy can be found at: http://www.purdue.edu/purdue/ea_eou_statement.html.

Student Course Evaluation

Student course evaluations will be conducted in a manner that maintains the integrity of the process and the anonymity of respondents. The instructors would welcome thoughtful, yet critical review, with as much detail as possible. Since access to any evaluation is not available to the instructors until after grades have posted, we would ask that as specific examples or suggestions be provided.

Course Schedule

Note: The listed schedule is tentative and it may be necessary to adjust the schedule forward or backward, depending on progression through the material. In addition, the instructor travels from time to time to participate in professional meetings and conferences, so class cancelations are possible. You will be reminded of changes via Blackboard. See attached Lecture Schedule (spreadsheet) for class dates, lecture content, and assignments.

INTRODUCTION TO NUCLEAR AND RADIOLOGICAL SOURCE SECURITY

Fall 2019

T, Th, 3:00-4:15 pm, WALC 3132

LECTURE SCHEDULE

The date assigned to a particular topic may change due to unanticipated scheduling conflicts. This schedule should be considered tentative.

Week	Class Dates	Subject:
1	August 20 August 22	Course Introduction, Basic Nuclear Physics Basic Nuclear Physics
2	August 27 August 29	Radiation Effects Nuclear Fuel Cycle
3	September 3 September 5	Introduction to Nuclear Security (NS) Purdue Ideas Festival – Atoms for Humanity
4	September 10 September 12	Nuclear threat by non-State actors Terrorism/Counterterrorism
5	September 17 September 19	CBRN weapons Legal framework for NS
6	September 24 September 26	Legal framework for NS Basic elements of NS
7	October 1 October 3	Security - Country group report EXAM #1
8	October 8 October 10	OCTOBER BREAK – NO CLASS Planning nuclear security at the State level
9	October 15 October 17	Planning nuclear security at the Facility level NS Facility Exercise
10	October 22 October 24	DBT exercise Physical Protection Design
11	October 29 October 31	Physical Protection Design (Cont.) Interrelationship between safety, security, and safeguards (N3S), N3S Exercise
12	November 5 November 7	Emergency Response – IND Simulation Nuclear Security Culture
13	November 12 November 14	Y12 Nuclear Security Culture Case Study Nuclear cyber security
14	November 19 November 21	Alternative Technologies TBD (Course review)
15	November 26 November 28	THANKSGIVING – NO CLASS THANKSGIVING – NO CLASS
16	December 3 December 5	Final Project presentations NO CLASS
17	December 11	Finals Week - EXAM #2 (take-home – due Tuesday, 12/10)

EMERGENCY PREPAREDNESS SYLLABUS ATTACHMENT

EMERGENCY NOTIFICATION PROCEDURES are based on a simple concept – if you hear a fire alarm inside, proceed outside. If you hear a siren outside, proceed inside.

- **Indoor Fire Alarms** mean to stop class or research and **immediately** evacuate the building.
- Proceed to your Emergency Assembly Area away from building doors. **Remain outside** until police, fire, or other emergency response personnel provide additional guidance or tell you it is safe to leave.
- **All Hazards Outdoor Emergency Warning Sirens** mean to **immediately** seek shelter (**Shelter in Place**) in a safe location within the closest building.
 - “Shelter in place” means seeking immediate shelter inside a building or University residence. This course of action may need to be taken during a tornado, a civil disturbance including a shooting or release of hazardous materials in the outside air. Once safely inside, find out more details about the emergency*. **Remain in place** until police, fire, or other emergency response personnel provide additional guidance or tell you it is safe to leave.

**In both cases, you should seek additional clarifying information by all means possible...Purdue Emergency Status page, text message, Twitter, Desktop Alert, Alertus Beacon, digital signs, email alert, TV, radio, etc...review the Purdue Emergency Warning Notification System multi-communication layers at http://www.purdue.edu/ehps/emergency_preparedness/warning-system.html*

EMERGENCY RESPONSE PROCEDURES:

- Review the **Emergency Procedures Guidelines**
https://www.purdue.edu/emergency_preparedness/flipchart/index.html
- Review the **Building Emergency Plan** (available on the Emergency Preparedness website or from the building deputy) for:
 - evacuation routes, exit points, and emergency assembly area
 - when and how to evacuate the building.
 - shelter in place procedures and locations
 - additional building specific procedures and requirements.

EMERGENCY PREPAREDNESS AWARENESS VIDEOS

- "Shots Fired on Campus: When Lightning Strikes," is a 20-minute active shooter awareness video that illustrates what to look for and how to prepare and react to this type of incident. See: <http://www.purdue.edu/securePurdue/news/2010/emergency-preparedness-shots-fired-on-campus-video.cfm>
(Link is also located on the EP website)

MORE INFORMATION

Reference the Emergency Preparedness web site for additional information:
